

### Sealing implementation instructions

1. A week after tiles are installed, you should smoothly polish the surface with a fine sand paper Number 400, in order to remove all left overs.
2. The surface must be wiped with a damp cloth to remove all the dust.
3. Sealer can be applied with a roller.
4. The tile will be saturated after 2 layers. Do not apply too much sealer, as the excess will leave a thick layer that will show traces.
5. In case that the tiles are installed with gaps, you should apply 1 layer of sealer before grouting, to prevent stains from grouting materials. That is usually in wet areas under running water.
6. **Noga** sealer is sufficient for 10 years, we highly recommend to apply the sealer again after that period.
7. Should you have any further question please contact us. [info@nogacementtiles.com](mailto:info@nogacementtiles.com)
